The invention relates to a variant dimethylarginine dimethylaminohydrolase-1 (DDAH 1; ADE71464) and a nucleic acid encoding it (ADB71463). DDAHs regulate the metabolism of ADMA dasymmetrical charginine; a natuarly occurring nitric oxide synthase inhibitor) and nitric oxide, which are relevant in disorders such as cardiovascular disease and diabetes. The DDAH 1 gene is located on chromosome 1, which as been implicated in susceptibility to diseases such as familial combined hyperlipidaemia, premature coronary artery disease (CAD), non insulin-dependent (type 2) diabetes mellitus, and disatolic hypertension. The variant DDAH 1 of the invention has Met at position 87, rather than Thr, which is caused by a C to T change in exon 1 at a position Thr, which is caused by a C to T change in exon 1 at a position or corresponding to base 260 in ADB71463 and ADB71465. Individuals heterocor homozygous for the Thr87Met allele have an increased risk of developing cardiovascular diseases and diabetes. The invention also susceptibility to a cardiovascular disease and diabetes in an individual by determining the DDAH 1 genotype; a method of treating diabetes or vascular complications of diabetes by enhancing nitit oxide availability, production or concentration; a method of targeting treatment of cardiovascular disease and diabetes in a hypertensive

that affects nitric oxide availability, production or metabolism, and transpace animal which carries a human variant DDAH I nucleic acid acquence. The nucleic acid molecules and polypeptides are useful for treating cardiovascular disease (e.g., coronary heart disease, cerebrovascular disease, and hypertension), and diabetes and its vascular cerebrovascular disease, and hypertension), and diabetes and its vascular cerebrovascular disease, and hypertension), and diabetes and its vascular complications. The methods are useful for determining whether a patient will benefit from treatment with a drug which affects nitric oxide availability, production or metabolism, a drug which reduces ADMA availability or concentration, orn an agent which elevates DDAH availability or concentration (auch as DDAH agonist). The methods are also useful for determining whether a patient will be at risk of adverse represents a specifically claimed nucleic acid encoding the variant (Met87) DDAH 1.

the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.

The invention relates to a combination comprising a number of CDNAs detecting differential expression of one or more cDNAs in a sample containing differential expression of one or more cDNAs in a sample containing nucleic acids by hybridising a substrate with the nucleic acids, thus forming one or more hybridisation complexes, detecting hybridisation complexes, detecting hybridisation complexes, derecting complexes, where differences between the standard and the sample complex formation indicate differential expression of cDNAs in the sample. The differential expression is diagnostic of prostate cancer. The invention also relates to profesion and antibodies related to the cDNAs. The combination is useful for diagnosing, treating or monitoring the progression of treatment of prostate cancer. The antibodies are useful for detecting prostate cancer. This sequence represents a human prostate cancer. This sequence represents a human prostate

Sequence 3778 BP; 1064 A; 821 C; 719 G; 1150 T; 0 U; 24 Other;

New combination comprising cDNAs that are differentially expressed in prostate cancer, useful for diagnosing, treating or monitoring the progression of treatment of prostate cancer.

Prostate cancer associated gene sequences, referred to as prostate cancer antigens, useful for treatment, prevention, and diagnosis of disorders such as prostate cancer.

Claim 1; Page 976-977; 2338pp; English.

AARF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointesting, nephrotropic, antilifective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polymucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF15506 to AAF16514 to nvention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the human hydrolase protein-2 (HYDRL-2) encoding CDNA, identified in Incyte clone 949738, derived from the PANCNOTOS library. It is expressed in reproductive, gastrointestinal, nervous, and cardicvascular tissues. This sequence maps to chromosome 6 within the interval from 42.30 to 45.40 centimorgans (CM), to chromosome 9 within the interval from 130.40 to 166.50 cM, and to chromosome 9 within the interval from 88.10 to 92.60 cM, HYDRL antibodies, agonists and antagonists are useful for diagnosis, trearment and prevention of disorders associated with altered expression or activity of HYDRL. It includes cell proliferative disorder such as cancer, autoimmune or inflammatory disorders such as inflammation, AIDS, neurological disorder activity as medullary sponge kidney, account as adrenal disorder such as adrenoleucodystrophy. The nucleotide sequences are useful for detecting and quantifying gene expression in tissues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel human hydrolase protein useful for diagnosing, treating and preventing cell proliferative, autoimmune and inflammatory, neurological, renal, adrenal and genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3 GlyLeuGlyHisPro---SerAlaPheGlyArgAlaThrHisAlaValValArgAlaLeu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         81
                                                                                                                                                             This invention describes novel polypeptides and their encoding nucleic acids derived from human pancreatic tumor tissue which have cytostatic activity. The sequences are also useful in producing pharmaceutical compositions for treatment of pancreatic tumors. AAZS388-Z33014 represent expressed sequence tag (EST) fragments derived from a human pancreatic tumor cDNA library and which encode the proteins represented in AAY3814-Y74252

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system--384-format sequencing pippline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)

CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genome Sciences Center and Genome Exploration Research for RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

/clone lib="Organ: brain; Vector: pYx-Nac; Site_1: EcoR I;
Site_2: Not I; The library was constructed_according to
Bonaldo, Lennon and Soares, denome Research, 6:791-806,
1996. Denatured mRNa was size fractionated on a 1% agarose
gel: First strand CDNA synthesis was primed with an
oligo-dT primer containing a Not I site. Double stranded
cDNA was size selected according to mRNA size fraction,
ligated with EcoR i adaptor, digested with Not I, and then
cloned directionally into pYx-Asc vector. The library tag
sequence located between the Not I site and the polyA
tail, is GTGCTGGAA. This library was created for the
University of Iowa Mouse Brain Molecular Anatomy Project
(BMAP): 'Gene Discovery in the Developing Mouse Nervous
System', supported by National Institutes of Mental Health
(NIMH), Hemin Chin, Ph.D., program coordinator."

BY754930 KEN full-length enriched, 8 cells embryo Mus musculus cDNA clone E860038F15 3', mRNA sequence.
and cloned into distinct DraIII sites of the pME185-FL3 vector (5' site CACTGTGTG, 3' site CACCATGTG). XhoI should be used to isolate the cDNA insert. Size selection was performed to exclude fragments <1.5kD. Library constructed by Dr. Sumio Sugano (University of Tokyo Institute of Medical Science). Custom primers for sequencing: 5' end primer CTTCTGCTCTAAAAGCTGCG and 3' end primer CGACCTGCAGCACA."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

| Sequence 2768, Application US/09252991A
| Sequence 2768, Application US/09252991A
| Patent No. 6551795
| GENERAL INFORMATION:
| APPLICANT: Marc J. Rubenfield et al.
| APPLICANT: Marc J. Rubenfield et al.
| TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
| TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
| FILE REPRENDE: 10196-102-18
| CURRENT FILING DATE: 1999-02-18
| PRIOR APPLICATION NUMBER: US 60/094,190
| PRIOR APPLICATION NUMBER: US 60/094,190
| PRIOR FILING DATE: 1998-07-27
| NUMBER OF SEQ ID NOS: 33142
| LENGTH: 2598

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 5
US-09-925-300-512
Sequence 512, Application US/09925300
Patent No. US2000151681A1
GENERAL INFORMATION:
APPLICANT: Craig Rosen,
APPLICANT: Craig Rosen,
TITLE OF INVENTION: Mucleic Acids, Proteins and Antibodies
FILE REFERENCE: PA101
CURRENT APPLICATION NUMBER: US/09/925,300
CURRENT FILING DATE: 2001-08-10
PRIOR PILING DATE: 2000-03-08
PRIOR FILING DATE: 1999-03-12
NUMBER OF SEQ ID NOS: 1890
SOFTWARE: PatentIN Ver. 2.0
SEQ ID NO 512
LENGTH: 3551
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    3651

                                                                                                                                                                                                                                                                                                                 gequence 9, Application US/09910943

patent No. US20020081610A1

GENERAL INFORMATION

APPLICANT: Harman, Curtis

TITLE OF INVENTION: Assays and Materials for Embryonic Gene Expression

TITLE OF INVENTION: Assays and Materials for Embryonic Gene Expression

TITLE OF INVENTION: Assays and Materials for Embryonic Gene Expression

CURRENT APPLICATION NUMBER: US/09/910,943

CURRENT FILING DATE: 2001-07-23

NUMBER OF EEQ ID NOS: 742

SOFTWARE: PatentIn version 3.1

SEQ ID NO 9

LENGTH: 770

TYPE: DNA

ORGANISM: Xenopus laevis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      133. .936
//note=-Amidinotransf, Region: Amidinotransferase. This family contains glycine (BC:2.1.4.1) and inosamine (EC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomyorin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.3.6.
These enzymes catalyse the reaction: arginine + H2O <=> oitnulline + NH3 Also found in this family is the /db_xref="CDD:pfam02274"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          478 GATGGGGGGAGATGTTTTATTCACAGGCAGAGAATTTTTTGTGGGGCCTTTCCAAAAGGACA

Gene="DDAH1"

/note="Amdinotransf; Region: Amidinotransferase. This family contains glycine (BC:2.1.4.1) and inosamine (BC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.6.

These enzymes catalyse the reaction: arginine + H2O <=> Citrulline + NH3. Also found in this family is the Streptococous anti tumor glycoprotein"

                Neuherberg, GERMANY
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DRYZ); Email s.wiemann@dkz-heidelberg.de;
sequenced by EMBL (Buropean Molecular Blology Laboratories,
Heidelberg/Germany) within the cDNA sequencing consortium of the
German Genome Project.
This clone (DKFZp686N2)76) is available at the RZPD in Berlin.
Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Purther
information about the clone and the sequencing project is available

Anidinotransf, Region: Amidinotransferase. This family contains glycine (BC:2.1.4.1) and inosamine family contains glycine (BC:2.1.4.1) and inosamine (BC:2.1.4.2) amidinotransferases, enzymes involved in creatine and streptomycin biosynthesis respectively. This family also includes arginine deiminases, EC:3.5.3.6. These enzymes catalyse the reaction: arginine + H2O <=> circuline + NH3. Also found in this family is the streptococcus anti tumour glycoprotein"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          144
